

Project Brief:

Architectural Portfolio (Tailwind Edition)

The Objective

Your goal is to build a high-fidelity, multi-page portfolio website based on the provided wireframes. This project is a test of your eye for detail. You will focus on creating a "pixel-perfect" recreation, ensuring that spacing, typography, and structural hierarchy match the designs exactly.

Core Technical Requirements

- **Framework: Tailwind CSS** (via the Play CDN).
- **Custom Styling:** Use `<style type="text/tailwindcss">` to add custom CSS. This allows you to define custom variables and colors directly in your CSS that Tailwind can then use as utility classes.
- **Layout Rule: Strictly avoid `position: absolute`** for structural layouts. Use the power of **Flexbox** and **CSS Grid** to place elements precisely.
- **Media:** You are free to choose your own images and icons, but the proportions and placements must match the wireframe.

Specific Feature Focus

- **Design Precision:** Match the "Brutalist" architectural aesthetic—heavy borders, large bold typography, and a monochromatic color scheme.
- **Custom Theme Variables:** Define your brand colors inside the `@theme` block. Once defined, you can use them as standard Tailwind classes (e.g., `text-brand-gold` or `bg-brand-gold`).

```
<style type="text/tailwindcss">
  @theme {
    --color-brand-gold: #da373d;
    --color-deep-charcoal: #1a1a1a;
  }
</style>
```

- **Hover Effects:** Every interactive element (buttons, cards, links) should have a deliberate hover state. Focus on smooth **transitions** using Tailwind's transition utilities.

Beginner Developer Milestones

Create three separate HTML files: `index.html` (Home), `projects.html`, and `contact.html`.

- Link the Tailwind CDN in the `<head>`.
- Set up your `<style type="text/tailwindcss">` block and define at least two custom colors using the `@theme` syntax.
- Build the Navigation Bar and Footer first. Use `<a>` tags to link the pages together.

Milestone 2: The Home Page (The Grid Masterclass)

Focus on the "Architectural Integrity" landing page.

- Use **CSS Grid** to create the asymmetric hero section (the large title layout).
- Implement the "Statistics" section (42+, 12, 08, 03) using a 4-column layout. Ensure the borders between items are sharp and clean.
- Build the "Current Projects" list at the bottom, focusing on typography and vertical alignment.

Milestone 3: The Projects Gallery

On the `projects.html` page, recreate the "Selected Works" archive.

- Use a responsive Grid (`grid-cols-1 md:grid-cols-2 lg:grid-cols-3`) for the project cards.
- Interaction: Use Tailwind's `group` and `group-hover` classes to create an effect (like a border change or image shift) when a user hovers over a project card.

Milestone 4: The Contact Layout

Replicate the "Leave Your Mark" contact page.

- Focus on form alignment. Use Flexbox to align labels and input fields.
- Recreate the information block on the right (Address, Email, Socials) using a vertical Flex container with consistent spacing (`gap`).

Milestone 5: Refining the "Feel"

- Go through each page and ensure your margins and paddings are consistent.
- Make sure all buttons and links have `transition-colors` or `transition-transform` applied so the site feels "premium."

GitHub & Submission

- **Repository:** Create a new GitHub repo named `architect-portfolio-tailwind`
- **README.md:** * Include a screenshot of your finished Home page.
 - Explain how you used the `@theme` block to create your custom colors.
 - Mention one specific challenge you solved using **CSS Grid** instead of traditional positioning.

SELECTED_WORKS

AN ARCHIVAL COLLECTION OF ACADEMIC AND PERSONAL PROJECTS FOCUSING ON
STRUCTURAL INTEGRITY, COMPUTATIONAL DESIGN, AND INTERACTIVE SYSTEMS. 2022
— 2024.

IMG_PLACEHOLDER_01

PROJECT TITLE ID_001

Exploration of generative patterns using modular arithmetic. Focus on visual weight and balance within a constrained 8px grid system.

#SYSTEMS #TYPOGRAPHY

IMG_PLACEHOLDER_02

INTERACTIVE SKILL: CSS HOVER EFFECT ID_002

Demonstrating rapid state transitions and color inversion through standard CSS utility classes. Hover over this card to view the visual transformation.

#INTERACTIVE #MOTION

IMG_PLACEHOLDER_03

PROJECT TITLE ID_003

Multi-dimensional data visualization for urban traffic flow. Utilizing dark-gray scalar values to represent density and frequency.

#DATA_VIZ #ALGORITHMIC

IMG_PLACEHOLDER_04

PROJECT TITLE ID_004

Design study of brutalist architecture translated into digital interface components. Emphasis on raw material feel and high contrast.

#BRUTALISM #UI_DESIGN

IMG_PLACEHOLDER_05

PROJECT TITLE ID_005

Responsive system framework for educational platforms. Prioritizing information hierarchy and accessible data nodes.

#FRAMEWORK #UIX_RESEARCH

IMG_PLACEHOLDER_06

PROJECT TITLE ID_006

Experimental log of 100 days of layout experiments. Documentation of grid-breaking patterns and asymmetrical balance.
